CARPENTER ANT CONTROL

The Sentry 3 Home Protection Plan Here's How It Works!

Service visits scheduled three times a year to help prevent your pest problem from re-occurring.

Spring

- * Thorough inspection in and around your home for pest conditions, and treatments of specific problems.
- * Setting non-chemical monitors in pest prone locations.
- * Application of protection barrier around the exterior of your home to keep crawling insects from entering.

Summer

- * Careful exterior inspection and treatment of pests, especially wasps' and bees' nests.
- * Exterior barrier application with power sprayer to keep out pest invaders.

Fall

- * Checking of monitors.
- * Evaluation and treatment of any pest infestations.
- * Exterior barrier application with power sprayer to keep out pest invaders.

1st Service	May or June
2nd Service	July or August
3rd Service	September or October

WHY DO YOU NEED A PROGRAM THAT PROVIDES A YEARLY PEST-FREE GUARANTEE?

Because the potential for pest reinfestation is non-stop all year long!

How Important Are The Following Benefits To You?

Environmentally Responsible Service

True's goal is to solve your pest problem while minimizing the amount of pesticides placed in your home. This is done through:

- * Careful, targeted application. . . We emphasize thorough inspections, since a responsible pest control program can't be developed without determining exactly what and where the pest problem is.
- * We evaluate the true extent of infestation and customize a treatment plan for your specific needs. Random application of pesticides is avoided
- * Non-chemical Monitors. . . We place monitors in pest-prone locations throughout your home to help pinpoint the "hot spots" of pest activity.
- * Prevention measures. . . We apply a protective barrier to the outside of your home to keep out pest invaders.
